Philosopher in a Jar is composed for vibraphone, piano, electric guitar, and amplified contrabass. The music was inspired by the unpublished short story, “The Galleon,” by T.V. Swantek. Drawing from the ideas of the seventeenth century French philosopher René Descartes, the story is a fictional realization of Descartes “evil demon” scenario and references his philosophical idea: “Cogito Ergo Sum.” In “The Galleon,” the artificial intelligence entity is the “evil demon” and is represented in the music by the use of perfect fourth intervals and steady rhythmic phrases. The protagonist of the story is a consciousness (the philosopher), presumably a former human, which has been placed into a robotic body and is confined to the artificial intelligence vessel. The philosopher is represented in the music with freely performed phrases, improvisation and serial passages. The story is presented in the form of a message being sent by the philosopher. The music incorporates the use of Morse code to convey the moral of the story: “Cogito ergo sum.” The title refers to the preservation of the consciousness being held in the AI vessel.

KEY COMPOSITIONAL COMPONENTS & CHARACTERIZATIONS

- Instrumentation: The piano and contrabass represent the machine. The coarse sounding harmonics in the contrabass and the clashing overtones of the un-dampened piano passages are used to convey the mechanical ambiance of the A.I. vessel. The vibraphone at rehearsal letters “C,” part of “D,” and “E” represent conscious thinking of the philosopher. The Electric guitar represents the soul of the philosopher and could be thought of as the voice of humanity. The element of improvisation also presents a contrast to the conscious-less machine.

- Harmonic language: The perfect fourth interval is used to represent the machine. Stacked fourth chords are presented in octave displacement as a means for the machine to trick the philosopher (see example in the vibraphone at rehearsal letter “K”). Pitch content from tone rows are presented in quasi-serial passages, and represent the philosopher’s freedom of conscious thought ($P_0:0,7,11,2,4,1,6,9,3,10,8,5$).

- Tempo/Rhythm: Sections marked “Freely” represent the philosopher’s consciousness (rehearsal letter “C”) or represent the idea of freedom presented in the “Programmed Dream Sequence.” Passages in strict tempo sections that feature steady pulsed rhythms, such as the piano and contrabass in the “Mechanical” sections, represent the machine.

- Morse code: Represents the message being sent from the philosopher.
PERFORMANCE INSTRUCTIONS

- In the vibraphone part, notes with a cross through the stem (\x) are to be struck on the edge of the bar with the shaft of the mallet stick.

- The note values in the “Ad lib” section at rehearsal letter “C” are approximate note values and should be realized at the performer’s discretion. This section should be performed at a “forte” dynamic level though the performer should vary the dynamic levels to shape the phrase as to their liking.

- The “Freely” section at rehearsal letter “E” is to be performed in the same manner as the above mentioned section (“C”). The vibraphonist and guitarist are independent of each other; there is no need for any rhythmic alignment. However, the distinct phrase in the guitar part which directly precedes rehearsal letter “F” should act as a cue into the next section.

- Rehearsal letters “P”, “Q”, and “R,” up to “S,” include boxed pitches of sixteenth notes in the vibraphone and piano parts. The players should perform the boxed notes and repeat them with no pause after the note successions. The result should be a constant flow of sixteenth notes. In the first measure of rehearsal letters “P,” “Q,” and “R,” the performers should vamp their part until the guitar and bass cue the next measure. The vamped measures should last three to five seconds. The vibraphone player and piano player should listen to the guitar and bass parts to receive a cue into letter "S."
• Morse code passages are to be played rhythmically just as a typical Morse code telegraph message would sound, but using the notes or note areas as provided in the boxed figures. The performer can think of the “dashes” and “dots” as (relatively) long notes and short notes. For example the code:

\[ \cdots / \cdots / \cdots / \] can be interpreted as: \[ \text{-----} \quad \text{---} \quad \text{---} \]

The slashes represent a space in between letters and should be observed with a rest. A blank space in between two slashes represents a space between words and should be observed with a rest longer than the duration of the rest in between letters. The rhythmic example provided above does not serve as a necessary solution, and the performers should interpret the code as best as they see fit. There is no rhythmic dependence among the individual parts from rehearsal letter “T,” up until “V,” and it is not intended to be in any rhythmic unison.

• In the piano part, hand symbols (\[\text{Hand Image}\]) should be performed as tone clusters in the general note area of where the hand image is placed on the staff. The performer should play a mix of white and black keys.
