

Center for Collaborative Studies in Mathematical Biology: Intercollegiate Biomathematics Alliance

Olcay Akman
Executive Director

The Intercollegiate Biomathematics Alliance (IBA) is a consortium created to promote research and education in biomathematics. With IBA, we strive to bring together institutions both academic and non-academic to form a collaborative community in the pursuit of advancing biomathematics, ecology, and related areas for the researchers, educators of the mathematical and biological sciences, and active scholars. In doing so, we provide a wide range of expertise, resources, and opportunities that are only available when we work together as a community.
